<b>Goals</b>	Happy us and happy customer; learning new things; well working software that fulfills all requirements
	We want to create a space where everyone can learn from each other and where we benefit from our different strengths
<b>Meeting norms</b>	Show up max 10 min late with reason, communicate beforehand if there's a bigger delay. let others know in advance if you miss a meeting
<b>Working norms</b>	Try to write clean code, be considerate about commits when pairing, everyone should agree before releasing
	If someone struggles with a task we support each other and give contribution to the person who helped
<b>Coordination norms</b>	Let others know upfront if encountering any problems, need help, can't attend a meeting via whatsapp group; read emails and messages
<b>Communication norms</b>	Camera on, let people finish their sentences, write stand up emails regularly, communicate problems openly, be nice :)
<b>Consideration norms</b>	Camera can be off if the bandwidth is bad on teams, less tasks for people if they have an exam etc
	We volunteer for common jobs
<b>Cont. improvement norms</b>	We jointly review the happiness index in every team meeting
<b>Rewards</b>	Applause
<b>Sanctions</b>	Sad smileys on zoom :(

Product Vision	Project Mission
<p>The firmware scraper makes it possible for those who are interested in gathering firmware data to always have the most recent information. Our automated solution offers the access to firmware’s meta data from numerous vendors with a single click and without the need for spending further human resources.</p>	<p>The mission of this project is to create a software for downloading firmware from different vendors and storing their meta data in MySQL database. The main functionality will be scheduled searching for firmware, checking for presence in the data base, downloading the updated ones and storing the meta data in the data base. Overall, ensuring that the information in the data base is up to date and readily available for further analysis.</p>

Term	Definition
