Business need:

Automated firmware download from various vendors

Our solution:

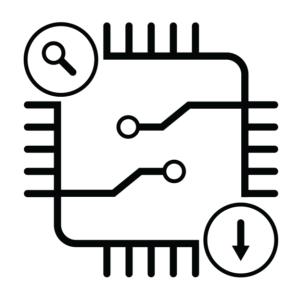

Python Selenium based script for downloading firmware and storing their meta data in MySQL database.

Functionalities:

- scheduled searching for firmware
- -checking for presence in the database
- -downloading the updated firmware's information
- -storing the meta data in the MySQL database.

Overall, ensuring that the information in the data base is <u>up to date</u> and available for <u>further analysis</u>.

AMOS Firmware Scraper
